

RICOMAN CPD SESSIONS

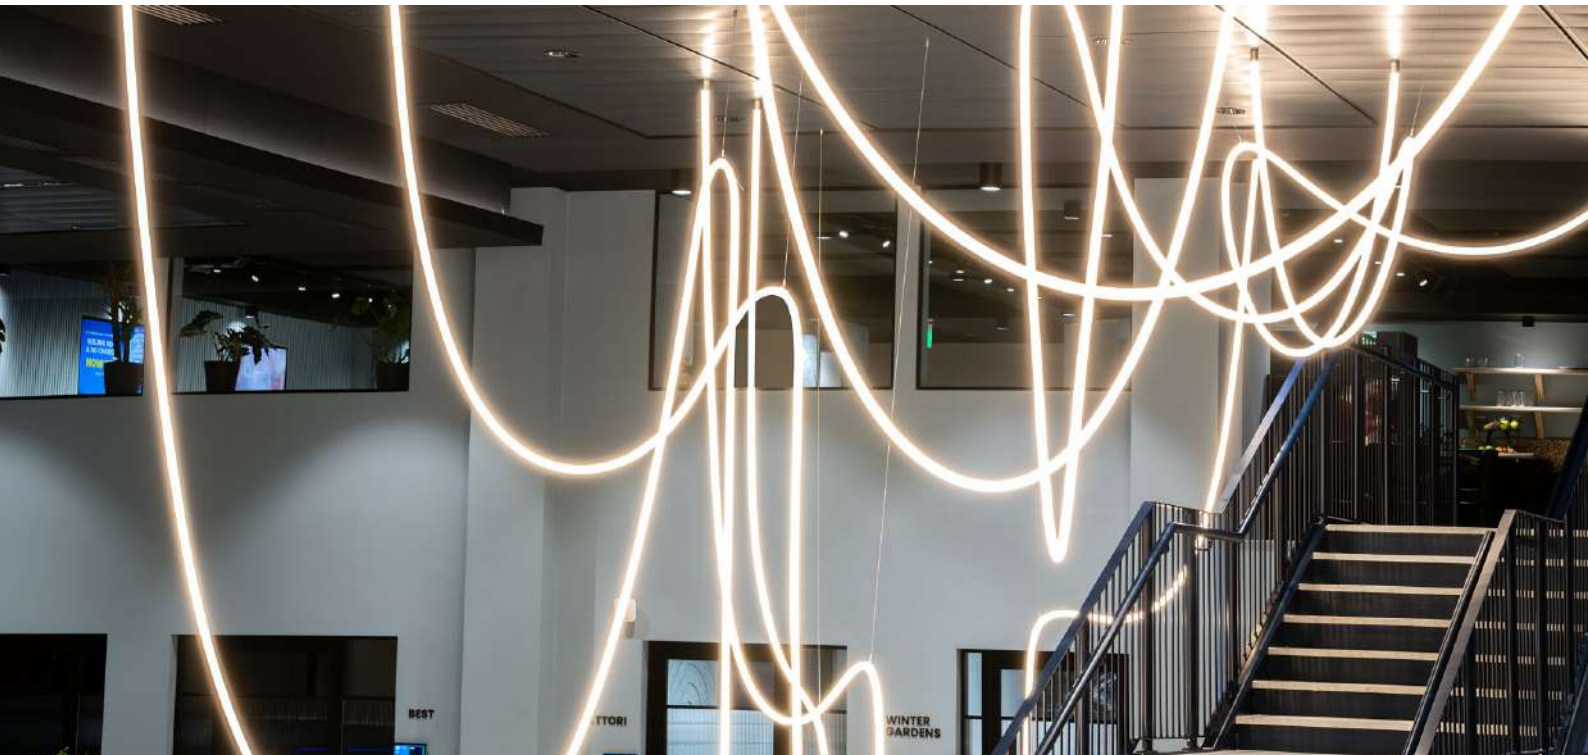

The lexicon of light.

You will be introduced to the **fundamental principles of interior lighting design** and the language commonly utilised, but often misunderstood.

The seminar starts at first principles and progressively moves into a more in-depth knowledge base, making it

suitable for individuals new to the subject and at the same time the more experienced engineer/designer. It aims to provoke questioning and debate.

After all, lighting can be both science and art and is therefore subject to opinion.

Agenda:

- Define and explain what are sometimes considered to be the primary parameters used to shape a lighting design.
- Define and explain parameters sometimes considered to be secondary, when considering a particular lighting design.
- A look at lighting design habits and shortcuts.
- A closer look at the latest lighting design guidance.
- Recap and questions.

Learning outcomes:

- Be able to define and understand the primary **parameters of lighting** engineering and design.
- Be able to define and understand the **secondary parameters** of lighting engineering and design.
- Be able to **implement this knowledge** through lighting design and lighting design specification.
- Be able to **assess and critique a lighting design**.
